AIR STATION, FIXED
OR VARIABLE SPEED**

**POWER
SYSTEM**
Air Compressors

from 7.5 to 22 kW
from 8 to 13 bar

KELVIN

Belt-driven rotary screw compressors

A true integrated air station

COMPRESSOR AIR RECEIVER AIR DRYER

The traditional compressed air installation becomes...

ADVANTAGES

- All-inclusive air compressors workstation.
- Complete range from 7.5 to 22 kW.
- Compact and modern design.
- Easy to use.
- Simple installation and maintenance.
- High quality compressed air.
- Long-life and maximum reliability.
- Flexibility of range.
- Extremely quiet operation.
- Designed for continuous use.
- Reduced energy consumption.

INTEGRATED DRYER AND FILTERS

The KELVIN range features a fully integrated and complete air treatment module (DF models) including a generously sized refrigerated air dryer and both inlet and outlet high efficiency filtration. This allows the integrated air station in the DF version to provide both dry and clean compressed air to quality standard classification 2-4-2, in accordance with ISO 8573-1.

The automatic draining of the condensate is collected from the refrigerated dryer and filters and arranged in convenient, single outlet.

All you need for dry, clean compressed air...
 ...super quiet, super reliable!

PREMIUM QUALITY
COMPRESSOR AIR END

ADVANCED
INTUITIVE CONTROL

EASY TO HANDLE

ON BOARD DUAL
COMPRESSED AIR FILTRATION

INTEGRATED
DRYER

■ The integration of all the fundamental components that make an ideal compressed air system (screw compressor, dryer, filters, controller and air-receiver) are arranged into a single modular device, providing an extremely compact space saving solution, with numerous significant advantages:

- Drastically reduced installation time and cost;
- High quality, clean and dry compressed air;
- Forms a fully automatic, self monitoring and integrated system;
- Excellent access for simple maintenance and easy access to the filters, refrigerated dryer and other components;
- Dry air receiver providing a constant flow of high quality compressed air and reduced corrosion;
- Lower operating costs;
- Automatic condensate discharge operated and adjusted from the main controller and arranged in a single outlet;
- Clear visualization of all operating values of the compressor as well as the dryer operation via the indicator available from the large and clear display of the DNAir2 controller.

■ **LOW NOISE LEVEL**

The centrifugal fan design along with the careful arrangement of all other components when added to the extensive sound insulation results in the KELVIN, offering a sound level among the lowest available.

KELVIN

Belt-driven rotary screw air station

The energy saving compressor

Optional expansion module*

GSM/GPRS/Ethernet/WiFi module (for on-line compressor status, remote assistance, connection with PC, Smartphone and Tablet, connection between neighbour compressors).

* on request

Master/slave function

It is possible to connect up to 4 compressors for managing the workload in such a way to equalize the hours of each compressor in a network to ease servicing.

The system pressure can be dynamically programmed to various set pressures according to usage.

The advanced controller fitted to the KELVIN range has been specifically developed to guarantee optimum monitoring and regulation of the compressor's operation, allowing flexibility and full programming of the complete compressed air station for maximum efficiency and safety.

DNetAir2 Electronic Controller

The main controller provides a multi-function and multi-language backlit LCD graphic display, the menu is drop down type for simple intuitive operation. The display utilises familiar and convenient icons for ease of use.

The main screen displays the following important information:

- Working pressure (offload and load pressure);
- Oil temperature;
- Compressor status (stand-by, offload, load);
- Cooling fan status (off or on);
- Date and time;
- Hours remaining to maintenance;
- Percentage load (inverter/variable speed models);
- Dryer dew point indicator.

High efficiency

The design of the KELVIN compressors, including the high efficiency IE3 motors, has been fully focused on combining the different components that make up a perfect compressed air installation for a completely integrated, modular and functional system that combines maximum convenience with optimum energy efficiency.

KELVIN DV

Belt-driven rotary screw air station

Variable speed for energy saving

With over 15 years of experience in the manufacture and design of Variable Speed rotary screw compressors, Power System is recognised as a technological leader in the field of Inverter employed variable speed technology. Reducing power consumption and protecting our valuable energy resources represents one of the greatest global environmental challenges of our times. The KELVIN Series offers energy saving Variable Speed screw compressors at 11 and 22 kW, robust and reliable, providing high performance, and energy efficient solutions. Power System is your ideal partner and uniquely qualified to offer the correct energy saving solutions, whatever your application.

A conventional fixed speed air compressor is typically controlled by the inlet valve, opening and closing continuously to meet the air demand. This type of operation may result in a large amount of wasted energy due to the compressor's operation within an on and off load position, typically resulting in expensive non productive "idle running". The constant pressure control obtained with the inverter in the variable speed versions, together with the absence of the idle running cycles and their subsequent discharge of valuable compressed air, reduces energy consumption drastically. The application of a frequency inverter, able to dynamically adjust the voltage/frequency/current values provided to the motor, allows the elimination of unnecessary power losses by constantly adjusting the generation of compressed air to match the real air demand, offering many proven advantages to the user:

- Continuous regulation of the motor speed and compressed air generation;
- Compressed air generation that will precisely match the air demand;
- The air output is constantly adjusted in a range typically between 40% and 100% of the compressors full capacity;
- Constant and accurate control to the operating air pressure control, selectable at any value between 6 and 10 bar (13 bar option also available);
- The energy consumption is proportional to the compressed air delivered.

- Significant energy savings
- Silent operation
- Compact design
- Low maintenance
- Versions with dryer
- High efficiency inverter

KELVIN

Belt-driven rotary screw compressors

7.5 - 11 - 15 kW versions

BELT-DRIVEN TRANSMISSION AND BELT PROTECTION SYSTEM

The POLY-V belt-drive ensures significantly lower power losses and three times the service life compared to standard range "V" type belts fitted to other compressors on the market. Belt tensioning is carried out through a slider system.

SPIN-ON FILTERS

The oil filter and separator filter, both spin-on type, ensure maximum efficiency and simple maintenance.

MINIMUM PRESSURE VALVE

Produced and designed in house using advanced materials and precision machining methods. The advanced design and high quality of engineering results in maximum reliability and increased air delivery in all operating conditions.

INTAKE REGULATOR

The highly reliable and robust electropneumatic system: adjusts the compressors operation to guarantee minimum pressure when idle running and provide maximum energy saving upon start-up. All this translates into an optimal energy cost/performance formula.

THERMOSTATIC VALVE

The thermostatic valve regulates the oil temperature, preventing the formation of condensation inside the oil-separator vessel.

COOLING AIR PREFILTRATION PANEL

The standard pre-filtering and washable panel filter assists in keeping the inside of the machine clean and ensures ease of maintenance and cooler operation.

Additional pre-filtering panel motor side only on 15 kW models.

HEAT EXCHANGER

The large combined heat exchanger ensures that the machine operates within the optimum temperature band. The resulting lower temperature of the delivered compressed air means that the condensation can be removed more easily and ensuring the efficient operation of the refrigerated dryer. The lower oil temperature reduces wear and improves energy efficiency.

COOLING SYSTEM

The thermostatically controlled centrifugal fan is activated automatically by means of the DNAir 2 electronic controller. This allows the machine to quickly reach and precisely maintain the ideal operating temperature. The fan is protected by a safety guard ensuring maximum operator security and at the same time meeting all international standards.

The complete compressed air station:

Rotary Screw Compressor, Dryer, Air Receiver, Dust Pre-Filter,
Coalescing Filter, Centralized automatic condensate drain...

ALL!
INCLUSIVE

**PREMIUM EFFICIENCY
IE3 MOTORS**

High efficiency IE3 motors
are fitted as standard.

PS 26TF AIR-END

Our own highly reliable, premium performance air-ends ensure low maintenance and a long life service. All of our air-ends are entirely designed, machined, assembled and tested at our modern manufacturing facility in Italy, together with the other key components, such as intake regulator and separator block and minimum pressure/check valve.

KELVIN

Belt-driven rotary screw compressors

18.5 - 22 kW versions

BELT-DRIVEN TRANSMISSION AND NEW BELT PROTECTION

The POLY-V belt-drive ensures significantly lower power losses and three times the service life compared to standard range "V" type belts fitted to other compressors on the market. Belt tensioning is carried out through a slider system.

MINIMUM PRESSURE VALVE

Produced and designed in house using advanced materials and precision machining methods. The advanced design and high quality of engineering results in maximum reliability and increased air delivery in all operating conditions.

SPIN-ON FILTERS

Our high performance and extremely reliable air-ends are entirely produced in our Italian facilities.

**PREMIUM EFFICIENCY
IE3 MOTORS**
High efficiency IE3 motors are fitted as standard.

▲ KELVIN 15-10

▲ KELVIN 22-10 DF

The KELVIN range is available in different versions, to satisfy every installation requirement:

- Power range from 7.5 kW to 22 kW;
- Operational pressure at 8-10-13 bar;
- 270 or 500-lt air receiver with the availability of a fully integrated refrigerated dryer;
- Operating noise level between 62 and 71 dB(A).

KELVIN 7.5 - 11 - 15 kW:

- Floor mounted, on 270-lt tank, on 500 lt tank;
- Also with dryer (DF models);
- Variable speed (only 11 kW version, DV models).

KELVIN 18.5 - 22 kW:

- Floor mounted or on 500 lt tank;
- Also with dryer (DF models);
- Variable speed (only 22 kW version, DV models).

Free air delivery as per ISO 1217 Annex C, at 7.5 - 9.5 - 12.5 bar at the compressor outlet. ± 3 dB (A) as PNEUROP/CAGI PN-NTC 2.3.
 ** For DV models the data refer to max. and min. values

THE COMPANY

Since 1992 Power System has been an indisputable leader in the design, development, production and worldwide distribution of industrial premium quality Rotary Screw Compressors in a power range from 2.2 to 315 kW satisfying air demands up to 50 m³/min. suitable for any technology sector, from the largest industry to the smallest enterprise. Power System has, since its very beginning, been engaged in a Research mission aimed to create advanced solution to compress air with the lowest possible energy impact.

Power System is dedicated to providing maximum value and security to all clients whilst delivering advanced technology that works.

Quality Certifications:

- UNI EN ISO 9001:2008 Vision 2000 (TÜV)
- Russian GOST-R Certification

Products Certifications:

- EC European Directives
- RINA-LLOYDS-REGISTER on request
- MOM for Singapore

**We fear no
comparisons.
Choose quality!**

FINI NUAIR S.p.A.

Production plant:

Via Toscana, 21 - 40069 Zola Predosa (BO) - Italy

Head office and sales office:

Via Einaudi, 6 - 10070 Robassomero (TO) - Italy
